Platform Elevation 5.5 " or 16" Below Eave
Stair Tread Dimensions 9" to 20"
Top Handrail 1" Round Tube
Intermediate Rail 1" Round Tube
Material Type G-90 Galvanized

There are 6 bundle/pallets with 40 each units or total 240 units.
One unit will cover a ring height of 44 inches. So if you have 8 ring bin it will take 7 units, because at the top ring there is a upright platform that is a starter panel for the units to hook up to.

These steps are for a spiral stairway and a Westeel Brand Bin. Any size bin can be used on the stair kit. There are enough steps here to do 24 bins if they have 10 rings.

This system needs a Platform Greene Galvanized part code\#35000, which is not part of this shipment. The only thing missing for someone to use these on a Westeel Bin would be the upright support panel, which can be ordered through manufacturer.

The consignee rejected the shipment due to moisture exposure where they claim that moisture was held against the product, whereas when installed would not have constant exposure of moisture for long periods of time.
